

Welcome to ZenResume

The Peaceful, Premium, and 100% ATS-Compliant Resume Builder

1. What is ZenResume?

ZenResume is an elegant, client-side web application designed to help job seekers build professional, ATS-friendly resumes. The core philosophy of the website revolves around three pillars:

- Zero Friction: No signup or accounts are required. Users start building immediately.
- 100% Data Privacy: All personal resume details remain inside the browser's local cache. No data is ever sent to an external database.
- Infinite Scalability: The application is built entirely as a static client-side web app hosted on Vercel, making it cost \$0 to run and capable of supporting millions of users.

2. Step-by-Step App Walkthrough

Step 1: Magic Import (AI Powered)

Click 'Magic Import' on the welcome screen. You can upload an existing PDF resume or paste raw resume text. Our integrated Gemini AI automatically reads and parses your details (Experience, Education, Skills, Projects) and pre-populates all the input form fields in seconds.

Step 2: Fill & Edit the Wizard

Navigate through the clean form fields using 'Next' and 'Back'. Add timeline entries for experience and education. The preview panel on the right updates instantly as you type.

ZenResume User & Admin Guide

Step 3: Choose Your Design Template

At the top of the preview panel, select from 7 professional templates (Minimalist, Technical, Bold, etc.). Toggling templates will adjust the stylesheet instantly with zero loss of the details you entered.

Step 4: Backup or Save Your Data

ZenResume saves progress automatically. For safety, click 'Backup' to download a '.json' file containing your settings. You can click 'Restore' and upload this file to resume building on any device.

3. PDF Export & Print Engine Optimization

ZenResume uses browser-native vector rendering (`window.print()`) to export resumes, ensuring that downloaded text is fully highlightable and selectable for ATS bots.

- Chrome & Edge Users: Custom CSS (`@page { margin: 0; }`) automatically hides the default browser headers and footers. You just click 'Download' and hit 'Save'.
- Safari & Firefox Users: Since these browsers ignore the CSS margins, ZenResume's built-in browser detector automatically opens a helpful checklist pop-up. It warns you to uncheck 'Headers and Footers' in the settings before completing the save.

4. Premium Dark Mode

Click the Moon/Sun toggle in the header navigation menu to swap between Light and Dark mode. Dark mode applies a soothing, glassmorphic layout theme (Slate background with warm orange accents). The theme will persist automatically the next time you visit the website.
